## **DETAILED ACTION**

### ***Examiner's Comments***

1. This action is in response to applicant's amendment received 9/1/2010.
2. Applicant's amendment has remedied all matters pertaining to indefiniteness in the previous office action and the rejections made under the second paragraph of 35 U.S.C. 112 are hereby withdrawn.
3. All matters of form have been remedied and applicant's amendment has combined the indicated allowable subject matter with their respective base claims which now places the application in condition for allowance over the prior art of record.

### ***Reasons For Allowance***

4. The following is an examiner's statement of reasons for allowance. The prior art of record fails to anticipate or show in combination all the features of applicant's invention:

With respect to claims 1 and 22, a power tool having, *inter alia*, vibration attenuating structure comprising at least one first vibration attenuator for attenuating vibrations transmitted from said stator to said housing at least in a direction substantially parallel to said first axis, the at least one first vibration attenuator extending from a support to an outer circumference of the stator; wherein the at least first vibration attenuator of vibration attenuators at a second axial end of the stator opposite the first axial end; and wherein the first vibration attenuators comprise leaf springs.

With respect to claim 26, at least one first vibration attenuator for attenuating vibrations transmitted from said stator to said housing at least in a direction substantially parallel to said first axis; and second vibration attenuators which attenuate vibrations along three orthogonal axes transmitted from a working member of said tool to said housing; wherein the at least one first vibration attenuator comprises a plurality of vibration attenuators at a first axial end of the stator and a plurality of vibration attenuators comprises a plurality of vibration attenuators at a first axial end of the stator and a plurality of attenuators at a second axial end of the stator opposite the first axial end.

Art Unit: 3721

The prior art of record shows similar examples of elements disclosed in applicant's invention; however, it is the examiner's opinion that it would not have been obvious to one having ordinary skill in the art at the time of the invention to combine or modify the prior art in order to arrive at applicant's invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
